

# CBC-150 Series Clutch/Brake Controls

## Installation and Operation Manual

**P-239-21-WE**  
**819-0477**

### Introduction

The Warner Electric CBC-150 series is a family of clutch/brake controls which conveniently mount to the conduit box cover of the Electro Module line of electromagnetic clutches and brakes. The CBC-150 series controls are dual channel devices available in two models:

CBC-150-1     120 VAC input  
CBC-150-2     220/240 VAC input

These controls are designed for operation of all Warner Electric 90 VDC clutches and brakes. They should not, however, be used to directly power Warner Electric permanent magnet failsafe brakes as these products require an adjustable current or voltage supply for optimum release. These controls indicate when the output channels are energized with LEDs

Suppression circuitry insures fast coil decay for rapid cycle rates. Customer provided switching is accomplished on the AC input to the control.

### Specifications

#### Input

CBC-150-1: 120 VAC, 50/60 Hz, 1 phase, 200 VA max.  
CBC-150-2: 220/240 VAC, 50/60 Hz, 1 phase, 200 VA max.

### Cycle Rate

In most applications, the maximum cycle rate is limited by the clutch and/or brake capability rather than by the control. To determine specific capabilities, consult the Application Engineering section of Warner Electric Catalogs, P-8586-WE, P-8587-WE, P-8588-WE, P-8589-WE, P-8590-WE or P-1264-WE. The following table lists those clutch/brake models which maximum cycle rate may be limited by this control.

**⚠ WARNING** To avoid injury (or even death), always make certain all power is off before attempting to install this control or any electrical equipment.

Please refer to the Connection diagram when following these instructions.

1. Clutch/Brake Wiring

- a. BRAKE (RED LED):  
Connect the red wire to one of the brake leads; connect the red/white stripe wire to the other lead wire of the brake (or clutch).
- b. CLUTCH (GREEN LED):  
Connect the blue wire to one of the clutch leads; connect the blue/white stripe wire to the other lead wire of the clutch (or brake).

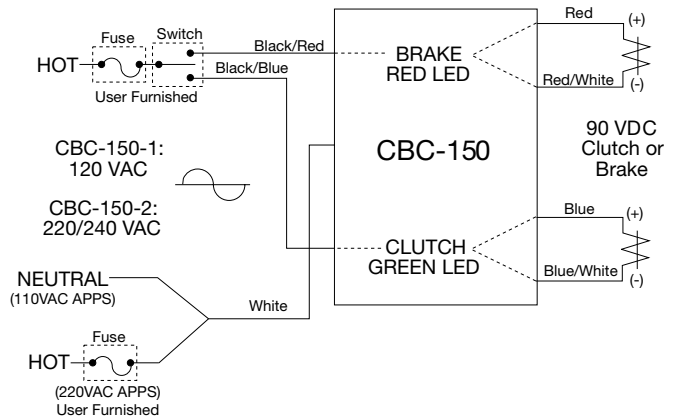

2. AC Input Wiring

- a. BRAKE (RED LED):  
Connect the black/red stripe wire to the hot side of the AC power source through the switch and fuse as indicated.
- b. CLUTCH (GREEN LED):  
Connect the black/blue stripe wire to the hot side of the AC power source through the switch and fuse as indicated.
- c. Connect the white wires to the neutral side for the 120VAC applications or the other hot for 220VAC applications. NOTE: the CBC-150-2 (220V) requires a second fuse be installed in the white wire (see diagram).

- 3. Secure the control to the conduit box with the (4) 10-32 Type F screws furnished.

**⚠ CAUTION** This is a floating type power supply and is not referenced to AC ground. Under no circumstances should any of the output wire leads be connected to earth or chassis ground as the unit will be destroyed.
